

Estate Information System

Challenge

A large state government organization, involved in promotion of industrial activity, has a vision to provide efficient and quality services to the customers. Its activities include acquisition, development and allotment of land/plots to entrepreneurs.

Solution

Regency InfoTech helped the organization to implement its vision of providing one-stop source of information for its prospective/existing clients and at the same time provide speedy quality services. A GIS solution developed by Regency InfoTech is exceptionally flexible, comprehensive and performance is arguably most satisfied as its users indicate.

Solution has the following three modules.

Estate Module: Provides Land requisitions and land acquisition information including survey numbers village, numbers, and district details.

Plots/Structures module: Provides information on Plots/structure such as area, dimension, neighbors and road facing details.

Allottee Module: Provides Allottee, Allotment, and Dues Information about the Plots/Structures allotted to a particular allottee.

Benefits

- Easy data entry/data retrieval
- A prospective entrepreneur could get layout information in all the industrial estates, identifying the plot of his choice and get online allotment.
- Improves internal efficiency of the organization, as the Zonal offices and the head office would have easy access to information about the industrial estates.
